1 Context

This application is made with Java. It is about the game *Forza Motorsport 7* which is a car racing game.

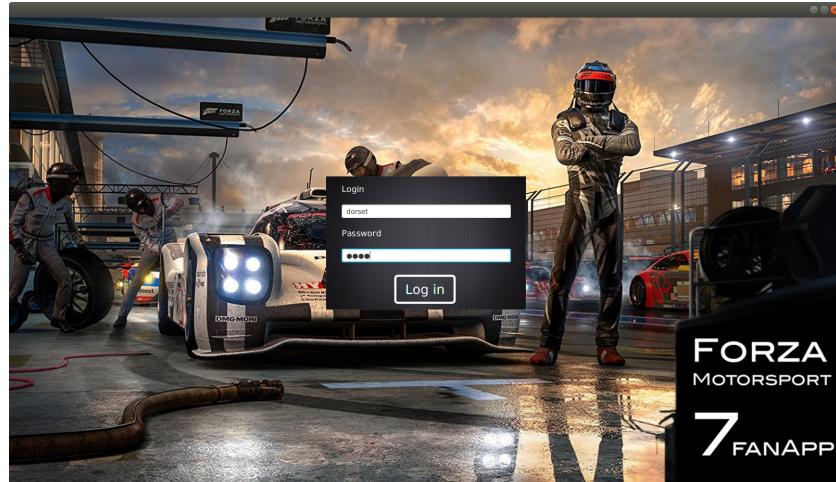

2 UI

The UI is very close to the original game. I tried to reproduce it as accurately as possible.

Please note that I developed this app on linux : some UI elements look different on Windows and does not fit very well :/

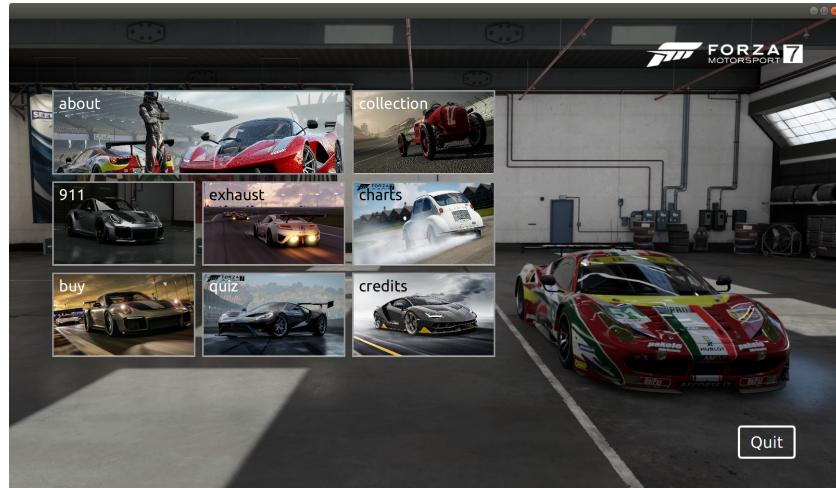

3 How to use it

3.1 Intro Scene

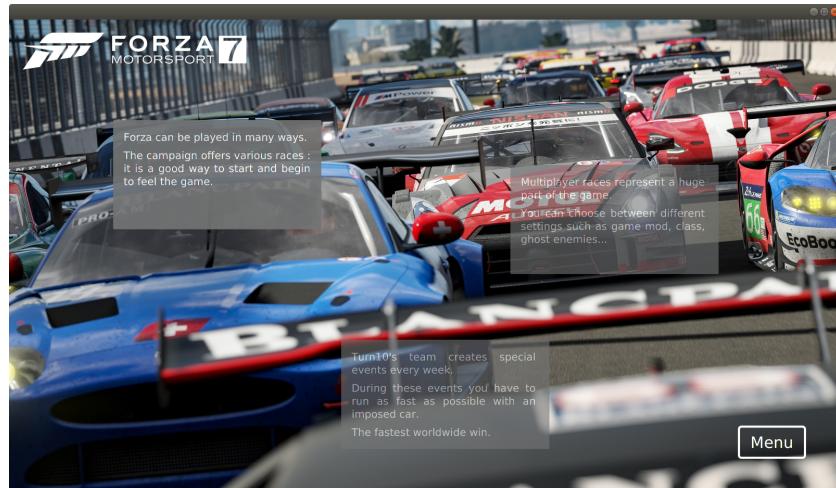

When user open the app the first shown scene ask for logins. As required login is *dorset* and password is *1234*.

3.2 Home menu

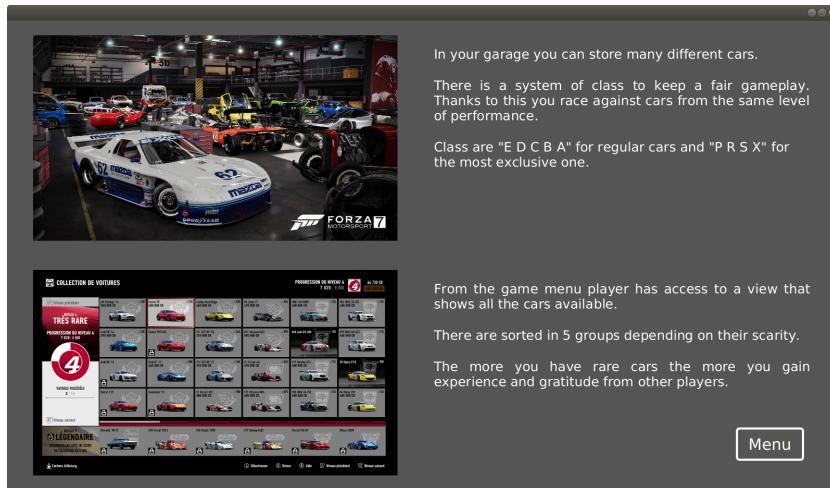

The home menu is the main scene of the app. It displays links to all other scenes of the application.

3.3 About

About scene gives some information about the game itself.

3.4 Collection

Some other infos about how the game it organized.

3.5 911

Here is a video of a car in the game. We see details and graphics!

It uses a *webview* object to play a Youtube video which Works perfectly on linux systems and does not on Windows.

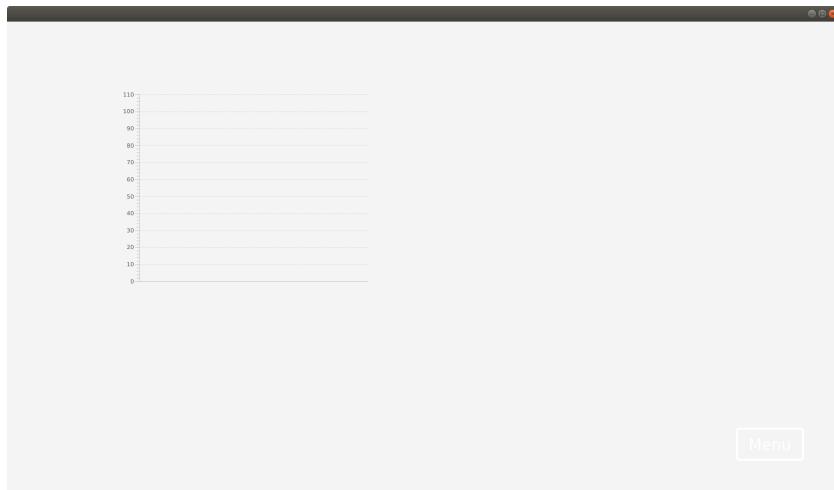

3.6 Exhaust

Here is a sample of the sound of a car in the game.

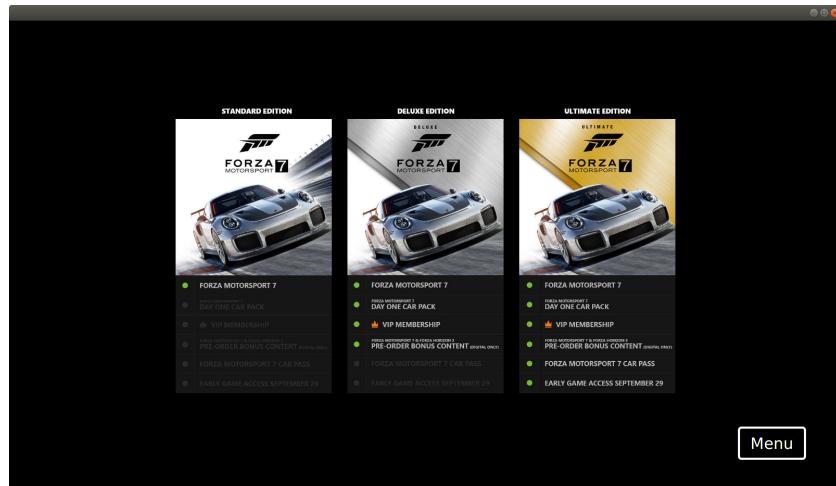

Same as last page, it uses a *webview* object to play a Youtube video which Works perfectly on linux systems and does not on Windows.

3.7 Charts

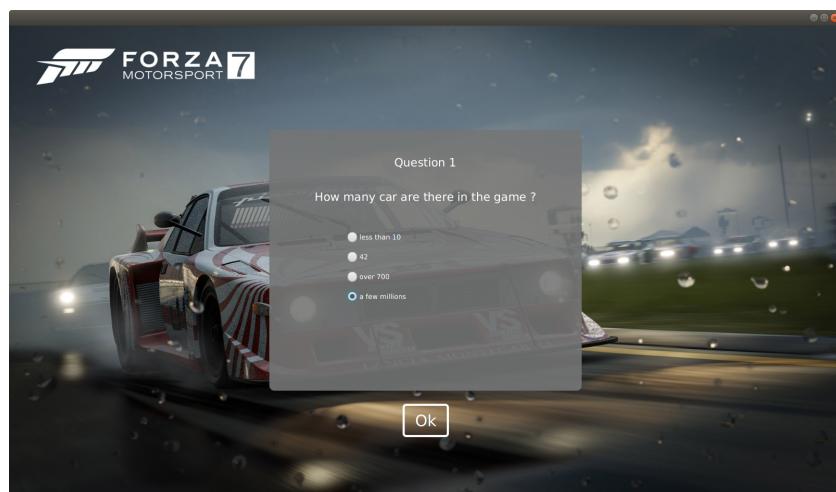

Some more infos about the game.

3.8 Buy

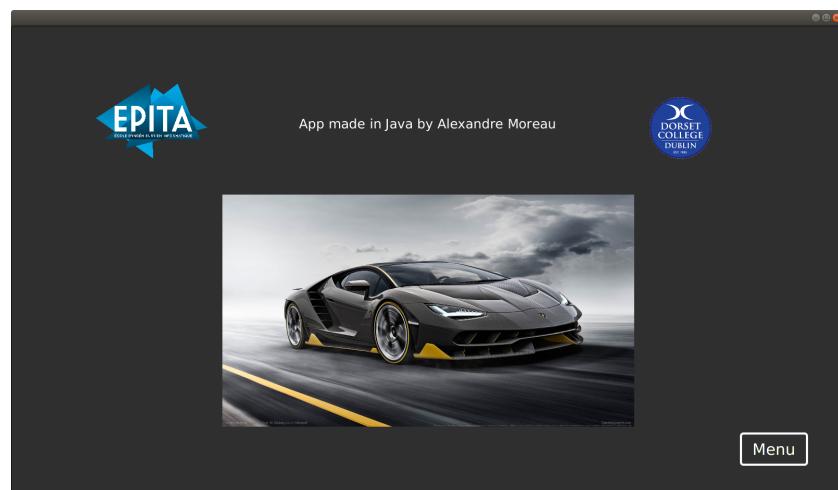

This is a presentation of the various versions of the game.

3.9 Quiz

Use the file explorer to load the file *QuizFile.txt*. Answers are displayed randomly and you get a score at the end.

3.10 Credits

Credits for creators.
